1. Introduction

Social psychology is the scientific study of how people's thoughts, feelings, and behaviors are influenced by the actual, imagined, or implied presence of others. Social psychology is a very broad field with many interesting sub-disciplines. This course is designed to be a general survey of the field of social psychology ? it will give you a "first taste" for many of the sub-disciplines of social psychology. We will go into as much detail as we can, spending approximately one week on each broad topic area. Within each topic area, we will focus on influential theories and the scientific evidence in support of (as well as against) those theories, and share our personal experiences that relate to the subject area.
